

PILOT NOTAMS

NEW! 1. MT-BlitzPlan with MT-VisionAir X - now 6 times faster

NEW! 2. Additional Parallel Processing possible: BlitzPlan calculations run in the background during inflight navigation

High speed !

The latest software version X.4.1 accelerates MT-BlitzPlan by factor 6

Through Parallel Processing MT-BlitzPlan remains active in the background while the navigation functions of MT-VisionAir X are fully available inflight

The 3G communication package via Shared Connection allows parallel downloading of MT-Satellite Radar and routing with MT-BlitzPlan

By the way: a dialogue window shows the current status. Thus you are always informed about the running process.

This significant improvement is achieved by the installation of the Graphic Accelerator (software version X.4.0). We introduced it in one of our last Newsletters -

see below:

NEW: High Performance 3D-graphic accelerator for MT-VisionAir X series

For the MT-VisionAir X series now the triple speed is available - via USB-Stick - through intelligent software, without hardware modification.

Due to the high computation performance the 3D terrain motion appears fluent - during acceleration phases of the aircraft or during a highly dynamic helicopter flight. Price: 380,- EUR net
